

A Trusted Partner in Mining and Mineral Processing Solutions

UMS Group's Key Offerings:

- Project Management and Support
- Concept Development
- Design & Engineering
- Specialist Engineering Consulting
- Construction Management
- Construction Contracting
- Commissioning
- Safety, Health, Environmental, Risk and Quality Management
- Specialist Technical Services and Audits
- Specialist Plant & Equipment Rental, Expertise and Consulting

Integrated mining and mineral processing capability

With more than six decades of experience and over 250 projects delivered globally, the UMS Group provides integrated mining and mineral processing solutions across some of the world's most challenging orebodies.

Operating through specialised business units focused on professional services, project execution and specialist plant support, UMS delivers projects from concept development and engineering through construction, commissioning and operational readiness.

Originating in the deep-level gold mining sector, UMS has evolved into a leading international mining services group with expertise across a broad range of commodities and jurisdictions. We are recognised for strong client relationships, dependable delivery, practical technical capability and a deep understanding of complex mining environments.

In addition to mine access and underground infrastructure, UMS has delivered mineral processing and process-related project solutions across chrome, platinum group metals, gold, iron ore and vanadium operations in South Africa, Zimbabwe and Namibia. Our teams support greenfield and brownfield projects through engineering, project delivery, commissioning and operational readiness.

Why UMS

- Integrated engineering through commissioning
- Global delivery capability across multiple jurisdictions
- Specialist underground construction expertise
- Strong safety culture, with major projects regularly operating for years without a lost time injury
- Extensive mineral processing experience across multiple commodities
- Specialist plant and equipment capability supporting schedule certainty

A team built on experience

At the heart of UMS is a team of dedicated professionals whose expertise and commitment drive our success. Led by experienced industry specialists, our teams foster a culture of innovation, accountability and operational excellence, ensuring every project is delivered to the highest standards of safety and performance.

UMS combines practical mining experience with engineering capability and a hands-on approach to solving technical and operational challenges. This allows our teams to respond effectively in dynamic environments and consistently deliver value to our clients.

Quality, safety and sustainability

UMS Group is recognised through a range of certifications and accreditations reflecting our commitment to excellence.

Our certified systems and practices support the highest standards in quality, safety and environmental stewardship across every aspect of our work.

These systems not only ensure compliance but reinforce our commitment to safe, responsible and sustainable delivery for our clients and partners worldwide.

**Trusted leaders in mine access,
underground construction, mineral
processing and mine infrastructure.**

Delivering success across every project.
